

WiFi for Cities and Communities

With the aduno® WiFi solution from ituma, you offer your guests, visitors or employees Internet with an individual landing page and access via voucher or one-click. In your backend area you can expect an extensive statistical evaluation as well as a comfortable monitoring of the connected office and end devices.

WiFi plays a central role in customer satisfaction of your visitors.

aduno® offers you a *stable* and *secure* WiFi solution for an optimal customer experience!

- Promote **special events** directly on the landing page! You can easily make changes to the page yourself at any time.
- Create different landing pages, e.g. for **customers** and **employees**.
- Offer special customers individual services, such as a **higher download rate** or **longer surfing time!**
- Create your own time-controlled landing pages and special accesses for **events** or **congresses**.

With aduno you offer your guests a premium service.

A professional aduno® solution offers legal security.

Add-on functions for your WiFi

Do you want a custom landing page for your WiFi to reinforce your brand image?

Do you want to create access vouchers for your guests and protect your WiFi from unauthorized access?

Have you always wanted to know when the most data is consumed on which access point?

Then the aduno® solution is right for you!

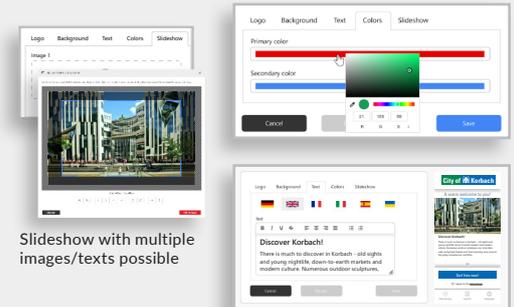

The application is web-based, you can use the functions of the portal at any time and from anywhere.

In practice, more than 10k customer portals have already been realized. Benefit from regular updates, the aduno solution is continuously developed!
